Nested stored procedures (or stored procedures that call other stored procedures) are a mixed blessing and a curse. They also serve as powerful fodder for starting holy wars. On the one hand, they serve as a great means for allowing developers to re-use code and thereby avoid DRY. On the other hand, they can also cause performance problems given that the very ability to re-use code implies that ...

Eclipse debugging works with the class actually loaded by the program.. The symptoms you describe sounds like the class in question was not found in the project, but in a distribution jar without debug info found before the project you are working with.. This can happen for several reasons but have a look at the location where the classes showing this behaviour is found (look in the navigation ...
