Non-24-hour sleep-wake syndrome, also called free-running type or non-24-hour circadian rhythm disorder, is one of many circadian rhythm disorders and probably the rarest and most difficult to correct of all of them. Most people have an internal biological clock, or circadian rhythm, that roughly adheres to a 24 hour schedule.

Besides being unbearably cranky the next day, skimping on sleep also makes us more likely to be overweight. A study in the American Journal of Clinical Nutrition found when people missed out on shut-eye (and slept for about four hours instead of eight), their caloric intake increased by a whopping 22 percent the next day. While many Americans suffer from stress-induced or nutrient-deficiency ...

Circadian Variation is a cycle that repeats over an approximate 24 hour period. The word stems from the Latin; circa (meaning 'about') and diem (meaning 'day'). There are some cycles that we are consciously aware of; the sleep/wake cycle being an obvious one, but most cycles we are not usually aware of.
