As is typical for many languages, full conditional sentences in English consist of a condition clause or protasis specifying a condition or hypothesis, and a consequence clause or apodosis specifying what follows from that condition. The condition clause is a dependent clause, most commonly headed by the conjunction if, while the consequence is contained in the main clause of the sentence.

According to the paper written by Martin Fowler, inversion of control is the principle where the control flow of a program is inverted: instead of the programmer controlling the flow of a program, the external sources (framework, services, other components) take control of it.It's like we plug something into something else. He mentioned an example about EJB 2.0:

Inversion is a way of reversing the usual or expected word order to bring emphasis to a sentence, to make it more negative, to make it stronger, more dramatic. Compare these two sentences: I have never seen such a large cat! Never have I seen such a large cat! You can see the effect of inverting the subject/verb and bringing the frequency adverb to the start of the sentence.
